

Cornell – Nu Flow Pipe Lining

Using forward thinking, **Nu Flow** patented technology, Cahill can fix residential and commercial pipe issues from the inside out. **Nu Flow** Pipe Lining has the unique ability to fix piping systems using existing access points. **Nu Flow** offers the most viable and least disruptive option for pipe repair, pipe renewal and trenchless sewer repair.

Nu Flow Pipe Lining can address

- Drain back ups
- Pinhole leaks
- Sheared or broken pipes
- Grease clogs
- Foreign object clogs
- Root intrusion
- Pipe deterioration

Advantages

- About 25% of the cost of traditional pipe replacement
- Takes about 25% of the time vs traditional pipe replacement
- No digging required
- Minimal disruption to occupants
- Minimal noise disruption
- Avoids infrastructure and landscape destruction
- Longer life expectancy than new pipes
- Minimal waste
- Can be used on a variety of piping materials which include clay, concrete, metal, iron, steel, PVC and fiberglass

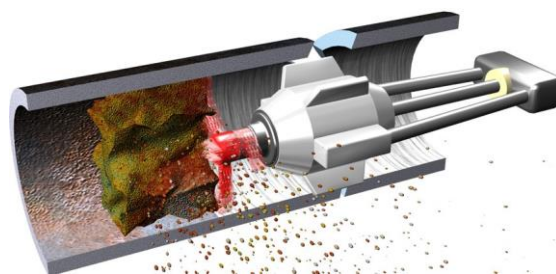

Nu Flow is best suited for 3/4" to 12" diameter pipes

Cornell – Nu Flow Pipe Lining

Nu Drain 3 Step Process

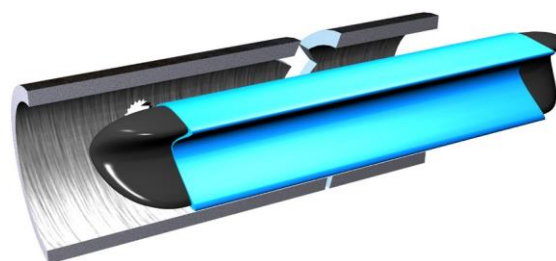

1 Pipe Cleaning

The pipe is first inspected with a camera. Blockages, build ups and/or corrosion are then removed with the appropriate tools.

2 Pipe Lining

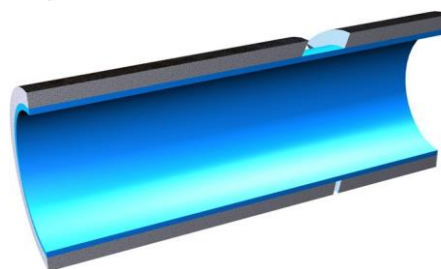

A specially prepared, epoxy felt liner is pulled inside of the pipe and a rubber bladder is then inflated.

1 Bladder Removal & Evaluation

After curing, the bladder is removed from the pipe and another camera inspection is performed. A long-term, structural pipe is now in place inside the existing pipe.

The pipe is rehabilitated to a better-than-new condition, with an increased flow rate eradicating the chance of groundwater pollution.

Great Customer Service

“We had a blockage in our sewer line the beginning of December and during the process of finding someone to correct our situation Cornell Video Inspection & Pipe Lining was referred to us. The crew arrived on a Friday afternoon and cleared our line enough so we could use our services for the weekend. They returned on Monday and began to install a liner in our sewer line. They also coordinated with the city so our entire line could be done at the same time. The crew we had were great and ready to answer any and all questions we had. They were polite and kept a very clean work area. When they left our home, you would never have known they were there. I would recommend them to anyone looking to have liners installed.”
